

HR Analytics Power BI Dashboard

Portfolio Documentation & Enhancement Plan

This document summarizes the supplied HR analytics dashboard, dataset, current report components, dataset-level findings, and recommended enhancements for an independent portfolio version.

1. Dataset Summary

Metric	Value
Employee records	1,480
Columns	37
Attrition	241
Active employees	1,239
Attrition rate	16.28%
Average age	36.94
Average total experience	11.28 years

2. Current Dashboard Audit

- KPI cards: Total Employees, Active Employees, Attrition Count, Attrition Rate, Average Age and Average Experience/Tenure.
- Charts/tables: Attrition by Department, Attrition by Salary Slab, Job Role & Satisfaction, Age Group Distribution, Attrition by Gender, Attrition Trend by Experience and Department-wise Employee Count.
- Slicers: Department and Age Group.
- The supplied screenshot currently has an Age Group filter selected, so its KPI values are filter-context values rather than guaranteed unfiltered totals.

3. Dataset-Level Findings

- Overall attrition in the supplied dataset is 16.28%.
- Human Resources has the highest department attrition rate in the supplied data at 26.8%; Sales follows at 25.2%.
- The 18–25 age group has the highest attrition rate at 36.6%.
- The 10+ LPA salary slab has the highest attrition rate at 19.2%.

4. Recommended Enhancements

- Create transparent DAX measures for Total Employees, Active Employees, Attrition Count, Attrition Rate and Retention Rate.
- Add slicers for Gender, Job Role, OverTime, Business Travel and Marital Status.
- Create department and job-role attrition-rate visuals rather than relying only on attrition counts.
- Add a dedicated Attrition Drivers report page.
- Validate data types, duplicate IDs, blanks, categories and salary/age groups in Power Query.
- Clear slicers before capturing the primary dashboard screenshot.
